DETAILED ACTION

Drawings

1. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Booth et al (US Patent No. 6,516,352).

Regarding claim 1, Booth et al disclose an apparatus for matching a plurality of interfaces, as shown in Fig. 7, comprising:

a first matching unit provided in a first interface (430) and a second interface (440), respectively;

a second matching unit (420) that is matched to the first matching unit; and
a data transmit/receive unit (410) for transmitting/receiving data by using one of the first and second interfaces that are connected by the matching of the first matching unit and the second matching unit.

Regarding claim 2, wherein the second matching unit comprises:

a decision unit (500) for determining whether an interface matched to the first matching unit is the first interface or the second interface (see col. 3, lines 13, lines 39-67); and

a distribution unit (412) shown in Fig. 8A and 8B, for distributing signal lines so that a corresponding interface can be used depending on the determination result.

Regarding claim 3, wherein the decision unit determines whether the interface matched to the first matching unit is the first interface or the second interface depending on the level of a voltage (see col. 14, lines 40-51; the level voltage is "0" or "1").

Regarding claim 4, wherein the data transmit/receive unit comprises: a first data transmit/receive unit for exchanging data with the first interface (430); and a second data transmit/receive unit for exchanging data with the second interface (440) (it is inherent that there is a transmit/receive unit to transmit and receive the signals; this is shown by the forward and reverse arrows (540A, 540B, 542A and 542B).

Regarding claim 5, wherein the first interface is an optical interface (see col. 12, lines 24-26).

Regarding claim 6, wherein the second interface is a copper interface (see col. 12, lines 26-28).

Regarding claim 7, wherein the optical interface is connected to the first data transmit/receive unit by means of signal lines of a SerDes (see col. 12, lines 24-26).

Regarding claim 8, wherein the copper interface is connected to the second data transmit/receive unit by means of signal lines of a MDI (see col. 12, lines 26-28 and lines 50-53; MDIO is considered as MDI).

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Weber (US Patent No. 7,174,106) is cited to show multi-rate and multi-level gigabit interface converter.

Olsson et al (US Patent No. 7,317,733) is cited to show apparatus, system, and method for protocol conversion in transceiver modules.

Muller et al (US Patent No. 6,873,630) is cited to show method and apparatus for a multi-gigabit ethernet architecture.
